FINGERPRINT RECOGNIZING APPARATUS AND INFORMATION PROCESSING UNIT HAVING SUCH APPARATUS

ABSTRACT OF THE DISCLOSURE

A fingerprint recognizing apparatus including a sensor section mounted on the apparatus body for detecting a fingerprint of an operator; a cover movable between an open position and a closed position for protecting the sensor section in such a manner that an operator's finger can access to the sensor section when the cover is in the open position; and a contact section arranged on the apparatus body at a position where the operator's finger can easily come into contact therewith during an operator's action to open the cover, the contact section being electrically connected to the ground of the apparatus body.
